I. EXECUTIVE SUMMARY

BUSINESS OVERVIEW

Manu Real Estate is a residential real estate business located in the heart of silicon valley that has **helped over 300 families** with homes ranging from **$300k to $12 million**. Manu Real Estate has found immense success in shaping the Bay Area by earning client trust and offering unparalleled professional customer support with client-focused and value-added services. Dominating the competitive markets, Manu Real Estate is diversified with investment strategies across the provision of services in **facilitating clients in the purchase and sale of realities**.

OUR MISSION

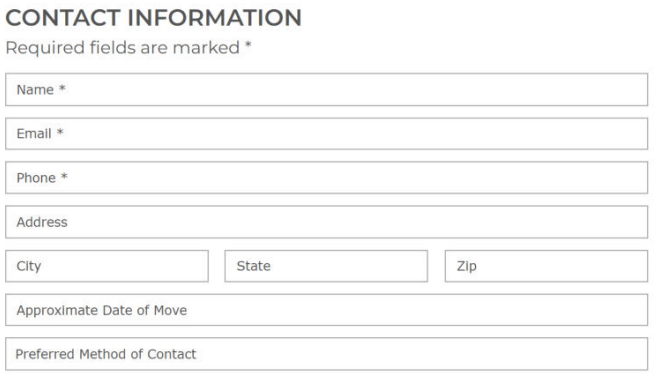

Traditional business and marketing strategies are **becoming outdated**, and the increased competition in digital marketing raises the cost of client acquisition. We must make the most of our limited exposure in order to stand out in these competitive marketplaces and leave a lasting impact on our customers. We can cut through the clutter and give them exactly what they want by **employing hyper-personalization**. Equally as important, we must uphold even higher standards of business ethics in light of the **increasing scrutiny of business practices**. We must run our business with ethics at its foundation, for our reputation, the integrity of the whole business, and long-term profitability.

TARGET MARKET

	Demographics	Geographic	Psychographics
Primary	• Age: 20-40 years • Marital Status: Couples, Married • Income: Range of $100k to $300k	• San Jose • Cupertino	• First time home buyers/sellers • Maximize return in investments in buying or selling houses • Value cultures and traditions
Secondary	• Ages: 40-57 • Marital status: Married • Job Sectors: Technology, Financial Services, Biotechnology	• Silicon Valley • Bay Area	• Retirement home • Urgency to buy or sell house • Previously sold or bought a house

CURRENT DATA COLLECTION PRACTICES

On the one hand, sellers give their name, email, phone number, address, city, state, zip code, anticipated moving date, and contact method. They specify the kind of property, the number of bedrooms, the number of bathrooms, and the square footage. On the other hand, buyers need to give income verification, including the **informations of their bank accounts**, eTrade, etc., to the realtor, who will send to the escrow agent.

RESEARCH METHODS

Primary Research	Employees Interviews	Customer Interviews	Financial Statements
Secondary Research	Website Analysis	Online Reviews	Economic Research

Primary Research: primary research is original information we collect for answering research objectives. We examined current procedures of data collection, concerns over privacy and ethics of data collection, and current business performances and reflections of the housing market.

Secondary Research: secondary research is information already collected by other researches that fit our research objectives. We examined the level of integrations of technology, current integrations of hyper personalization, housing markets, and economic conditions that influence Manu Real Estate.

FINDINGS AND CONCLUSIONS

FINDINGS

Discoveries based on employee and customer interviews, website analysis, online reviews, financial statements and economic research.

STRENGTHS	WEAKNESSES
Expertise in the Bay Area Positive brand reputation Strong complementary services	Operational risks Lack transparency in data collection Customer conversion rate
OPPORTUNITIES	**THREATS**
New technological innovations Increased housing locations Looser pandemic regulations	Competitors Raising interest rates Economic & market related risks

CONCLUSIONS

METHODOLOGIES	CONCLUSIONS BASED ON METHODOLOGIES
Employee Interviews	Transparency must be increased to show intentions and outcomes of data collection.
Customer Interviews	Sound security must be implemented to address online safety concerns and consumer engagement must be increased to lessen the stress consumers may face.
Website Analysis	Modern technology must be maximized to upgrade their traditional and outdated technologies such as billboards.
Online Reviews	Hyper personalization must be increased to help customers, who have numerous house preferences and suggestions.
Economic Research	Hyper personalized marketing boosts client conversion rates amidst a declining economy.
Financial Research	High interest rates, economic downturns, and inventory shifts have lead to a 32.4% decrease in net income during 2022.

PROPOSED STRATEGIC PLAN

We have condensed our research findings into a set of five key objectives, which constitute the acronym **"HOUSE"** - our objectives are detailed below:

H **arness sufficient data collection**

O **ptimize digital marketing**

U **phold company values**

S **trengthen moral promises**

E **xpand upon data security**

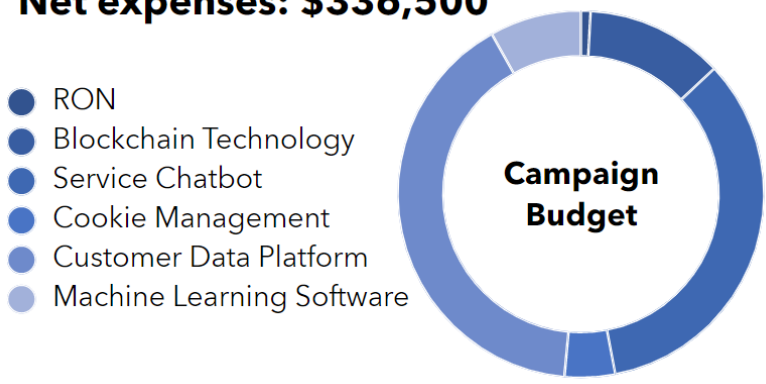

PROPOSED STRATEGIC PLAN

1. Cookies
2. Customer Data Platform
3. Custom Targeted Email Advertising
4. Social Media Advertising
5. Omnichannel Optimization
6. Service Chatbots
7. Real-time Update Notifications
8. Blockchain
9. Remote Online Notarization
10. Digital Consent Forms

PROPOSED BUDGET

The total budget for the campaign accounts for **45%** of Manu Real Estate's 2022 net profit.

Net expenses: $336,500

TIMELINE OF ACTIVITIES

The proposed plan, **HOUSE**, will include 10 activities and be structured into two sections: **hyper personalizing customer journey**, and **enhancing data protection**. Our HOUSE campaign is set to initiate January 2024 and conclude at the end of December 2024.

January 2024: implement digital consent forms to be transparent about privacy and business ethical practices

January: Utilize tracking cookies to collect key information about potential customers

February: switch to remote online notarization (RON) so documents are notarized via electronic forms

March: Install customer data platform (CDP) to build technological architecture for data, AI, machine learning, etc.

March: implementing Social Media Advertising, custom targeted email advertising , omni-channel optimization, real-time update notifications and service chatbots

April: Implement blockchain technologies to encrypt all transactions and financial records

December 2024: end of the HOUSE campaign

KEY METRICS & ROI

We will assess the effectiveness and efficiency of the proposed plan by using both financial and marketing metrics and key performance indicators. These include SG&A, sales growth, website traffic, and CLV/CAC. We have also modeled the expected revenue and expenses for the duration of operation HOUSE, which is projected to be:

Expected Revenue: $1,150,500

Expected ROI: 243%

II. INTRODUCTION

A. DESCRIPTION OF THE BUSINESS

The residential real estate company Manu Real Estate, which is based in the heart of Silicon Valley, has assisted over 300 families in finding houses ranging in price from $300,000 to $12,000,000. By gaining the trust of its clients and providing **unmatched professional customer care** along with client-focused and value-added services, Manu Real Estate has had tremendous success in reshaping the Bay Area. Manu Real Estate is diversified with investment strategies throughout the provision of services in **assisting customers in the acquisition and sale of properties**, dominating the competitive marketplaces. This company offers realtors who can represent buyers or sellers to assist clients purchase or sell homes and has an affiliation to Coldwell Banker Real Estate LLC, an American real estate franchise. The founder and current CEO of the business is a real estate professional named Manu Changotra. She herself is nationally ranked top 250 realtor by Wall Street Journal and holds an MBA degree. Ultimately, Manu Real Estate continues to carry the bedrock of the economy and continues to build wealth for hundreds of families.

Coldwell Banker Office - Cupertino

B. DESCRIPTION OF TARGET MARKET

	Demographics	Geographics	Psychographics
Primary	• Age: 20-40 years • Marital Status: Couples, Married • Income: income range of $100k to $300k	• San Jose • Cupertino • Sunnyvale • Santa Clara	• First time home buyers/sellers • Maximize return in investments in buying or selling houses • Value cultures and traditions
Secondary	• Ages: 40-57 • Marital status: Married • Job Sectors: Technology, Financial Services, Biotechnology	• Silicon Valley • Bay Area	• Retirement home • Urgency to buy or sell house • Previously sold or bought a house

C. OVERVIEW OF THE BUSINESS' DATA COLLECTION PRACTICES FOR BUSINESS DECISIONS

When a customer wants to sell a house, the customer visits the Manu Real Estate website and enters their **contact details and home specifications**. They must include their name, email, phone number, address, city, state, zip code, anticipated moving date, and preferred method of communication under "contact information." They specify the kind of property, the number of bedrooms, the number of bathrooms, and the square footage under "house specs." A customer who wants to purchase a home must draft an offer and submit it to the realtor. The customer must provide **verification of their funds**, including the names of their bank accounts, eTrade, etc. The buyer agent receives this information from the client, who then gives it to escrow.

III. RESEARCH METHODS

A. DESCRIPTION & RATIONALE OF RESEARCH METHODOLOGIES SELECTED

We conducted research on Manu Real Estate in two different sections, primary and secondary research. For **primary research methods,** we collected original information for answering our research objectives. For **secondary research**, we used information already collected by other researchers that fit our research objectives.

RESEARCH STUDY OBJECTIVES

1	Analyze the strengths and weaknesses of business and investment strategies
2	Examine the impact of current integrations of technology and customer data collection
3	Analyze current financial positions and performance of the business
4	Identify customer concerns with ethics and privacy and determine how exposed customers are them

PRIMARY RESEARCH

Employee Interviews: We conducted employee interviews to gather information about the employee's thoughts about the current state of Manu Real Estate. Employee interviews played a crucial role in our research as we were able to acquire information about how data collection was conducted. Employee interviews gave us insight into what the employees believed were the weaknesses and strengths of the operations.

Financial Statements: Requested two financial statements: balance sheet and income statement. We calculated sets of comprehensive metrics used to provide reasoning for Manu Real Estate's earnings. We generated analysis on the business' performance and strategies.

Customer Interviews: We interviewed customers to ask what they thought of the overall process of buying a house with Manu Real Estate. Customers were asked about their concerns with ethics and privacy in the business and how technology can be improved to create a safer environment.

SECONDARY RESEARCH

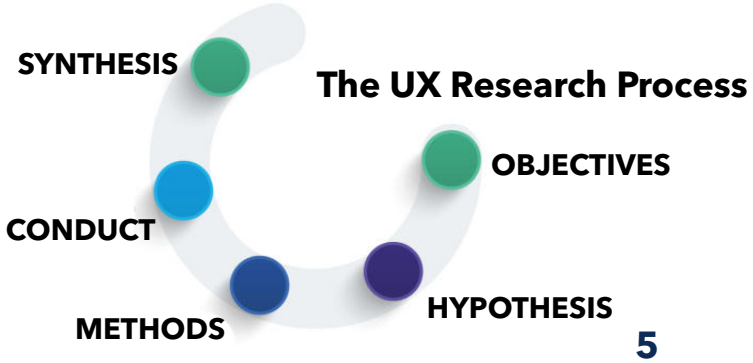

Website Analysis: We conducted website analysis to collect data on the processes of selling and buyer houses and functionalities of a real estate company's business model. We are able to identify key strengths and weaknesses of external operations within the business.

Online Reviews: Online Reviews posed as an important source of information while researching the opinions of the customer. With the data collected from these reviews, we were able to identify the strengths and weaknesses of Manu Real Estate. Online reviews gave us insight into what aspects of the business we must capitalize on.

Economic Research: We researched the market conditions of the housing market in the bay area and silicon valley using tabulated reports provided by the California association of realtors and Freddie Mac. We assessed complex dynamics between market trends and macroeconomic factors. We forecasted 2023-2024 interest rates based on past interest rate fluctuations that are managed by the Federal Reserve.

B. PROCESS USED TO CONDUCT THE SELECTED RESEARCH METHODS

We used the UX research process to address each methodology in order to conduct a precise and accurate research study. We may investigate and ascertain the context of consumers' experiences using UX research methods. This concerns with strategic user knowledge and goes beyond the calculated inquiries.

IV. FINDINGS AND CONCLUSIONS

A. FINDINGS OF THE SEARCH STUDY

We utilize a **SWOT analysis** as a framework for assessing an organization's competitive situation and constructing a strategic strategy. We evaluate **internal and external variables** as well as present and anticipated future situations. Based on six methodologies—financial statements, staff interviews, customer interviews, website evaluations, website analysis, and economic research—we identified the strengths, weaknesses, opportunities, threats, and opportunities of Manu Real Estate.

STRENGTHS

- Expertise in the bay area
  - Well informed on neighborhoods and schools
- Marketing Resources
  - Radio Show, BillBoards, Publications
- Positive Brand Identity
  - Proven Track Record
- Diversified in different communities
  - San Jose, Cupertino, Fremont, Santa Clara
- Extended Services

WEAKNESSES

- Operational Risks
  - Dependence of information can provide incorrect information
- Third party service providers and servicer due diligence of potential assets
- Out-dated technological integrations
- Inaccurate Models could increase risk
  - Models are manually used to collect home prices

OPPORTUNITIES

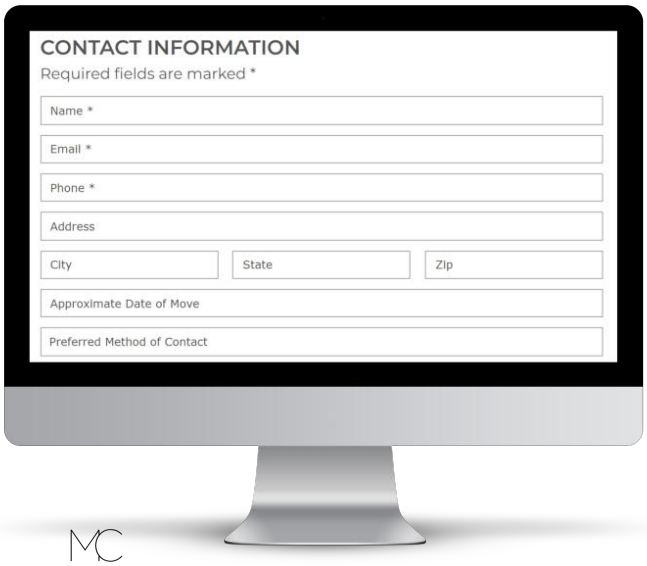

- High Inventory for home sales resulting in investment opportunities
- New innovations in Proptech (Property Technology)
- Increased housing locations across Silicon Valley and the Bay Area
- Looser pandemic regulations
  - Mask mandates for open houses

THREATS

- Investment and Market Related Risks
  - Increasing interest rates
  - Economic slowdowns or recessions
- Geographic concentration exposes investors to greater risks
- Competitors
  - Keller Williams Realty, RE/MAX, Other Corporations
- Inventory/Industry Shifts
  - National Inventory Shortage

Manu Real Estate		
	Income Statement	
	2021	2022
Revenue		
Sales	$3,675,000	$2,250,000
Sales Returns	$0	$0
Sales Discounts	$0	$0
Net Sales	$3,675,000	$2,250,000
Cost of Goods Sold	$0	$0
Gross Profit	$3,675,000	$2,250,000
Operating Expenses		
Depreciation Expenses	$0	$0
Coldwell Banker Commission Split (Expense)	$1,470,000	$900,000
Maintenance Expenses	$147,000	$100,000
Advertising Expenses	$70,000	$56,000
Total Operating Expenses	$1,687,000	$1,056,000
Income From Operations	$0	$0
Interest Income (Expense)	$0	$0
Income Before Income Taxes	$1,988,000	$1,194,000
Income Tax Expense	$927,203	$556,882
Net Income	**$1,060,797**	**$637,118**

Furthermore, economic downturns have resulted in rising property prices and market movements such as an **inventory scarcity** in the United States. This implies that the quantity of residences on the market is decreasing, as is the number of buyers looking to purchase a home. To recession-proof a real estate firm, marketing must be geared specifically to the demographic that still wants to buy a property. This entails being able to look for new consumers and deliver a personalized customer experience to them in order to convert them into a sale.

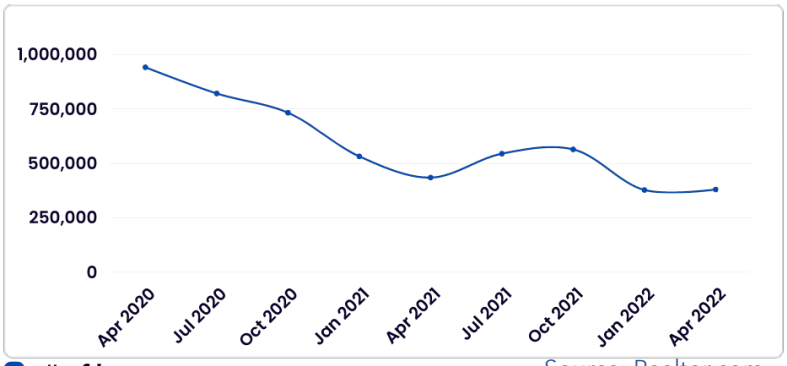

MANU CHANGOTRA
ManuRealEstate

Financial Statements

We gathered Manu Real Estate's income statement focusing on the company's revenue, costs, profits, and losses over a certain time period. With this we can gain useful insights about a company's operations, performance, and financial status by evaluating its financial statement. According to CEO, Manu Changotra, the net income in 2021 was $1,060,797, the highest level of profit. She attributes her achievement to the Federal Reserve decreasing interest rates in 2021, which will encourage individuals to sell and buy more homes. However, this company did not do as well in 2022 as it did in 2021, with net income falling to $637.118. Multiple reasons contributed to this year's earnings being 40% lower than last year. Since inflation rates have risen, the **Federal Reserve has raised loan rates to more than 6%**, preventing individuals from purchasing homes, resulting in fewer consumers.

Becoming Scarce

Housing Inventory in April 2020 is around 800 thousand, which fell to around 400 thousand in April 2022.

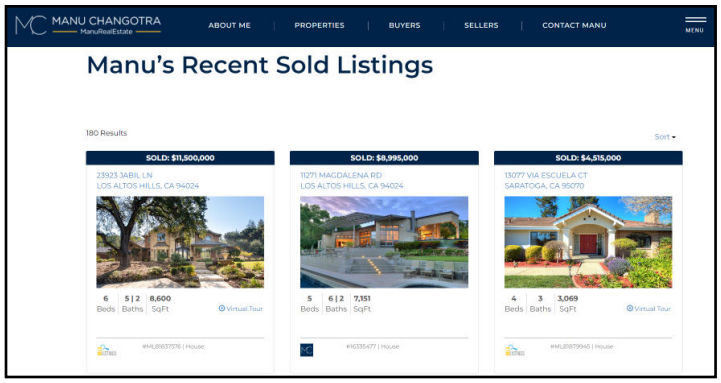

Source: Realtor.com

Employee Interviews

Client's personal identifiable information is being collected, with client's agreeably giving up that information by filling out survey. When used alone or in conjunction with other pertinent data, personally identifiable information (PII) can be used to identify a specific person. Examples of PII include name, social security number, and biometric records. However, customers are shown the transparency of that data collection since Manu Real Estate does not tell customer's about the intentions and outcomes of their data collection. Ultimately, **transparency must be increased** in this company.

Customer Interviews

The general public is concerned about their online safety which is why a lot of people cover up bank names, eTrade account info, etc. This shows that more efforts need to go into implementing sound data security. In addition, the process of selling and buyer a house is very complex and stressful, and can also take months. This is why people like to have real estate agents to guide them through this process.

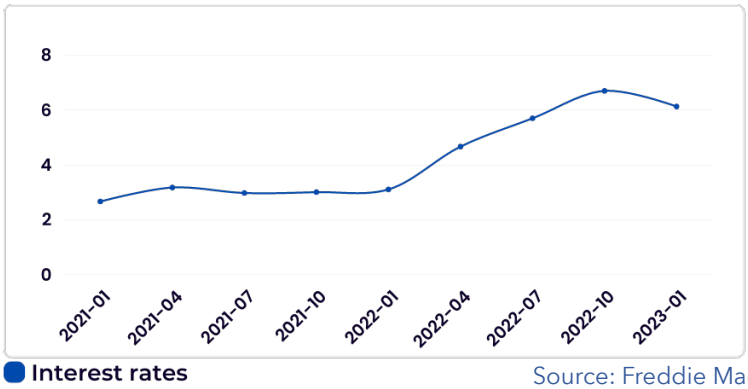

Online Reviews

When searching for a house, the average buyer generally prioritizes aspects that cannot be physically changed. Next, they tend to **prioritize changeable aspects** of the house. More complex trends can be seen in house preferences, for example, Indian homebuyers are likely to choose homes that face north or east, because it compiles with their culture. This means that **hyper personalization is extremely important** when it comes to creating individual journeys for each customer.

Low to High

30-Year Fixed Rate Mortgage Average was around 2% in 2021 but were raised to around 6% in 2022

Source: Freddie Mac

"[Regarding] data privacy, I blurred out my bank account and other account names. I'm worried they will get stolen."

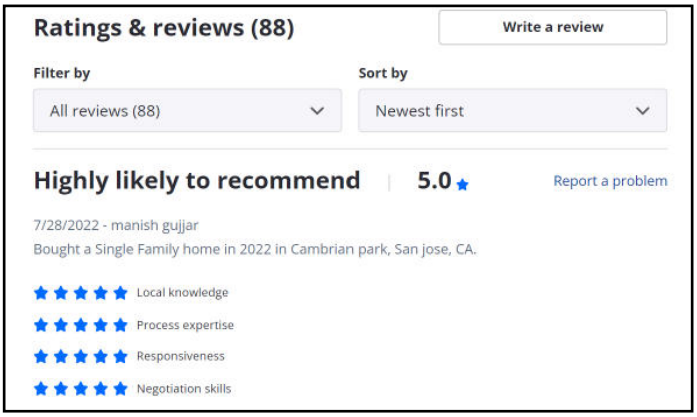

12/5/22 - Rohit Shah
Bought a single family home in Cupertino, CA

"I think having more transparent private policy would make people feel safer."

12/23/22 - Adrian Hu
Bought a single family home in San Jose, CA

Website Analysis

Manu Real Estate is implementing various technology forms such as radio shows, billboards, and publications. Despite the diverse marketing resources, these are very traditional and outdated integrations of technology. Additionally, **instagram** and **facebook** accounts don't have any advertising. This means that technology usage needs to be upgraded and there needs to be a stronger social media presences.

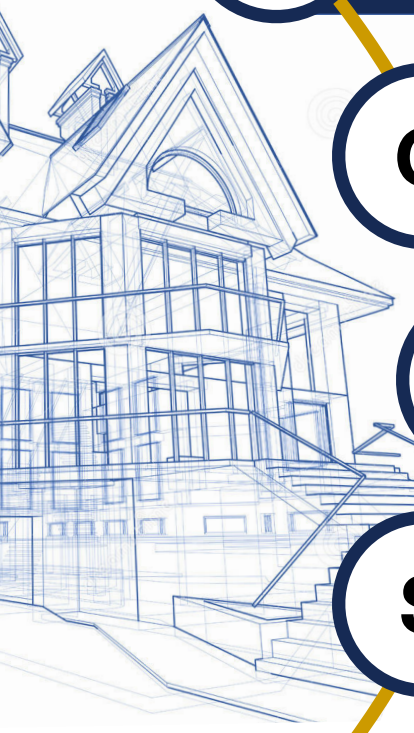

Economic Research

It is expected that the Federal Reserve continue to **increase interest rates** until the **middle of Q3** of 2023's fiscal year. As a result, increased mortgage rates can reduce house buying demand, causing home values to decline. This concludes that housing is going to continue being in a stagnant condition, where markets are becoming more beneficial for buyers (called buyers market). This means that marketing need to be hyper personalized so that conversion rates are high and revenue will be boosted.

V. PROPOSED STRATEGIC PLAN

A. OBJECTIVES AND RATIONALE OF THE PROPOSED STRATEGIC PLAN

As technology becomes prominent in our everyday lives, this raises **concerns regarding privacy and safety** of data collection. In today's society, it is crucial to maintain a safe environment while making steps toward new innovation, as the ethical aspect of every consumer plays an important role in the success of a business. **Operation HOUSE** which aims to create a safe and sufficient space by allowing consumers to be able to collect data in the most reliable way. Our operation will be structured into two sections: Hyper personalized Customer Journey and enhancing data protection, which will be elaborated on later.

- **H** arness data collection for appropriate security and privacy usage
- **O** ptimize digital marketing through hyper personalization
- **U** phold company values and traditions
- **S** trengthen customer relations by delivering on moral promises
- **E** xpand upon data security

Operation HOUSE: CAMPAIGN OBJECTIVES

1	Increase customer conversion rates by 40%
2	Increase customer retention by 50%
3	Increase sales outlook by 30%

B. PROPOSED ACTIVITIES AND TIMELINES

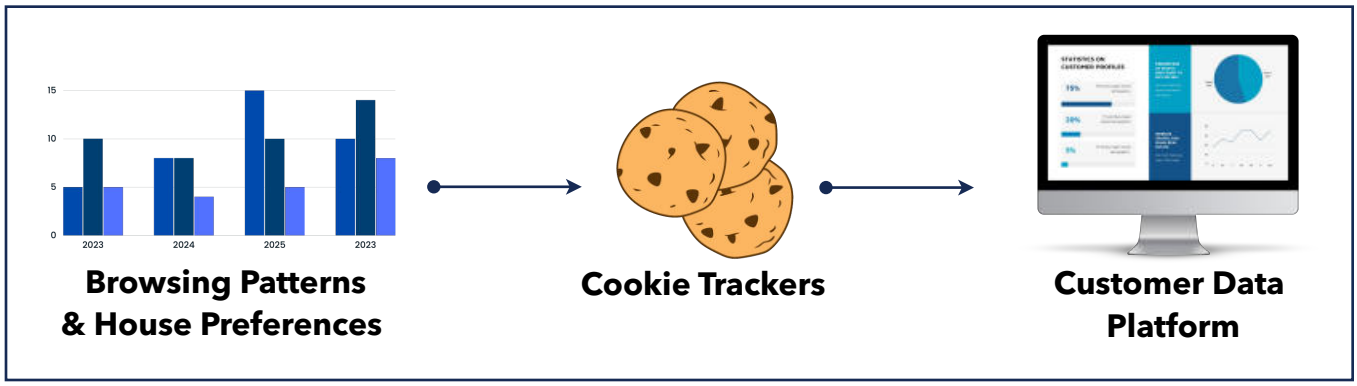

Proposed Activities and Campaign Structure

Under **operation HOUSE**, we plan to introduce 10 activities that will meet our campaign objectives and rationale. Campaign HOUSE will be structured into two categories: **Hyper personalizing customer journey** and **enhancing data protection**. Under hyper personalizing customer journey, there will be 7 activities that will enable advanced marketing solutions and consumer interactions through big data, AI, and automation. Under enhancing data protection, there will be 3 activities will implement stronger data privacy and ethics, and implement stronger online security.

Hyper Personalizing Customer Journey

Cookies

We may use many layers of information to better understand a customer's demands can come from a range of first- and third-party data sources. Manu Real Estate might use cookies on their website to have a better understanding of their customers' needs. Cookies are a type of tracking technology that operates as little files that are placed on a website visitor's browser when they visit it. Cookies provide us with information such as search and browser history, IP addresses, category browsing patterns, customer home preferences, and Google searches. Gathering this behavioral, psychographic, geographic, and demographic data allows for targeted marketing to each sector and person. This improved data collection is dynamic and real-time, allowing for a more relevant and ideal understanding of clients.

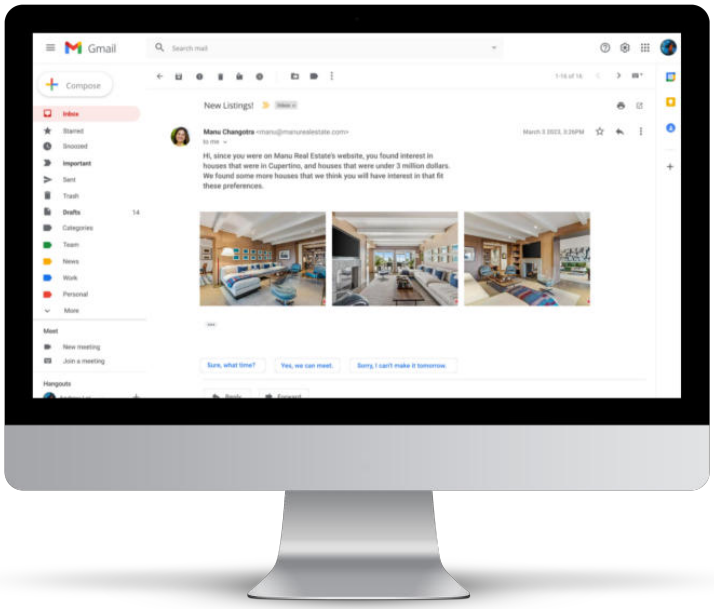

Customer Data Platform

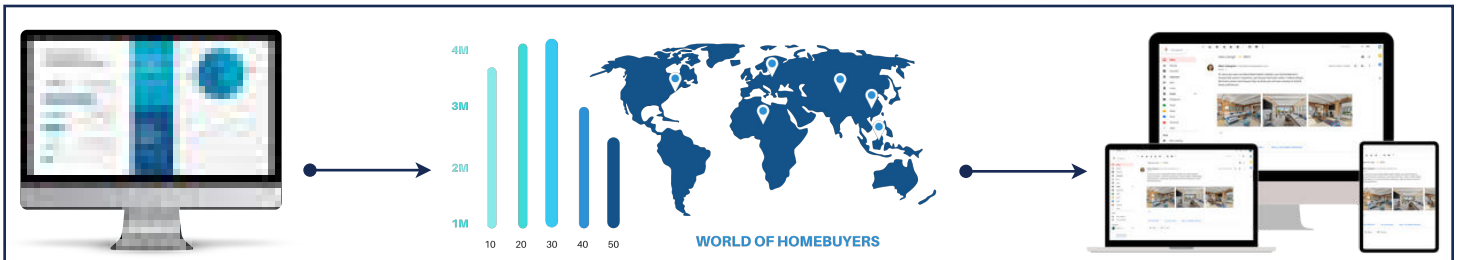

CDPs are software architectures that facilitate the collection of datasets (cookies, surveys, MLS) for organizing data management and data science, as well as more intelligent consumer analytics. Constructing a customer data platform for Manu real estate consolidates data sets into consolidated user profiles and audiences, and links the necessary data to the tools required for developing personalized customer experiences.

This would give a platform on which we could gather and communicate data from cookies, surveys, and MLS in an effective manner. By developing attributes and audience personas in real-time, we can gain a comprehensive understanding of the consumer and provide individualized customer experiences.

Custom Targeted Email Advertising

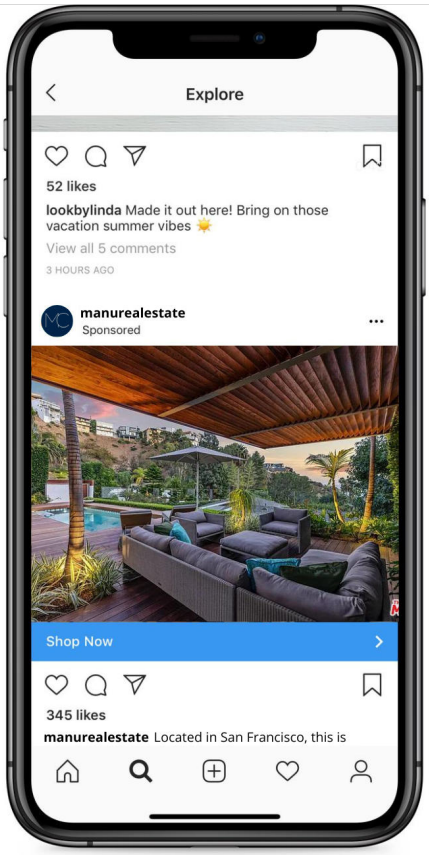

Digital marketing methods are always developing, and hyper personalization is critical in moving towards the future of online advertising. Manu real estate may employ automated email campaigns to digitally send highly contextualized emails with individualized home suggestions to potential home buyers and sellers based on customer demographics, house preferences, search and browsing history. We can create a one-of-a-kind experience that caters to each user's interests and goals by customizing advertisement design depending on end-user preferences. In turn, this will boost customer loyalty and enhance engagement, satisfaction, and conversion rates.

Customer Data Platform → **Build & Segment Email Lists** → **Autogenerated Email Campaigns**

Process for Creating Hyper Personalized Email Advertising Campaigns

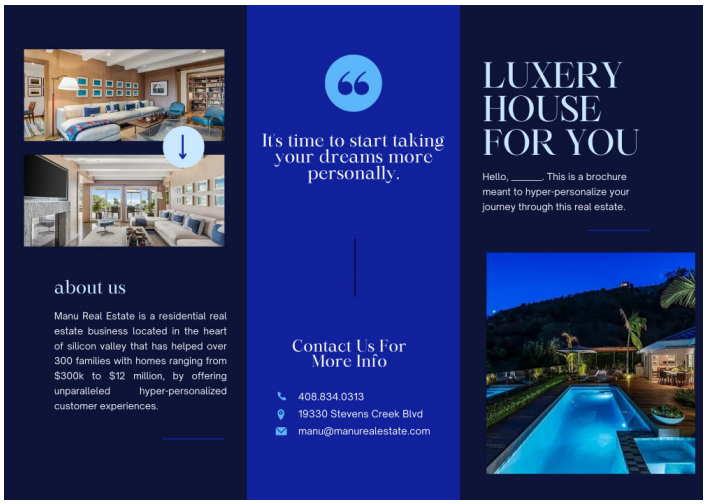

Social Media Advertising

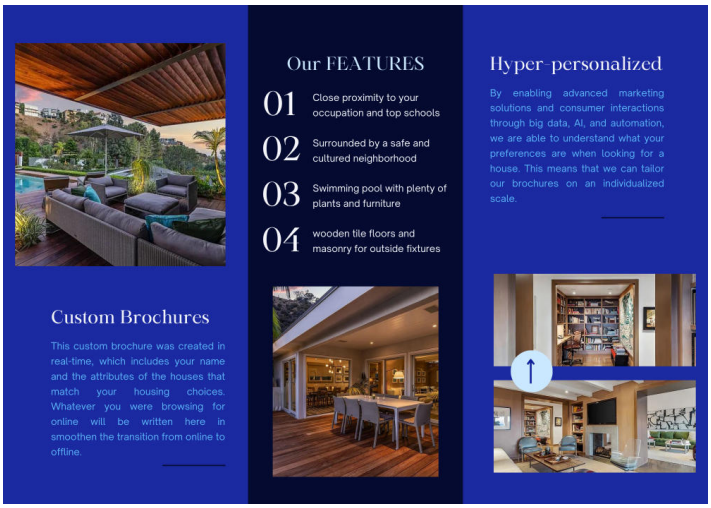

Equally as important as email advertising, social media advertising will be an important factor to the expanding of our business because it allows them to reach a large, targeted audience in a cost-effective and efficient manner. Manu Real estate can promote their listings, develop our brands, and demonstrate their expertise by producing and disseminating interesting content. By using targeting options such as demographics, interests, and behaviors, social media ads can show relevant content to potential customers who want to buy or sell a house. In addition, social media channels give Manu real estate the opportunity to interact directly with potential clients, which can foster relationships and foster trust. Additionally, social media analytics can assist real estate businesses in monitoring their online presence, measuring the success of their marketing initiatives, and making fact-based decisions. Manu Real Estate can engage easily with their clients through social media, which enables them to get immediate feedback and cater to unique needs and preferences. This degree of engagement and interaction can serve to fortify relationships and boost client loyalty, leading to more potential clients. Ultimately, in order to reach our target audience, create leads, and drive sales, both social media advertising and email advertising are essential tools.

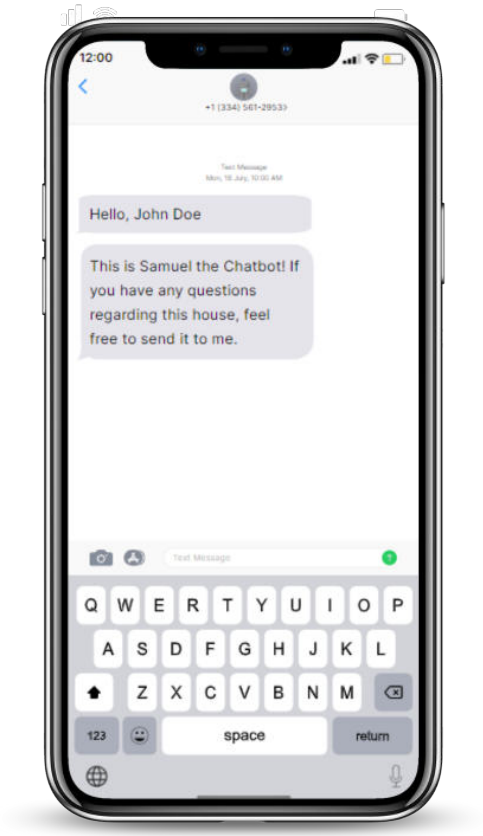

Omnichannel Optimization

An omnichannel strategy to sales that aims to give clients a smooth purchasing experience, whether they're browsing for properties on a desktop, calling an agent, or seeing the property in person. On the back end, optimization of an omnichannel approach entails integration of promotion and communication channels. We can build a tailored, omnichannel experience by connecting clients' online and data profiles with the experience they receive during open houses utilizing AI technologies. This can be illustrated through the use of open houses and brochures.

During an open house, real estate agents welcome the general public to view the property and tour the house, as well as detail the home's history, conditions, and upgrades to any customers who attend. When a customer with a customer profile on the CDP signs up for an appointment, agents are alerted and given the information they need to service consumers in a tailored manner. Custom brochures may also be created in real time, including their name and the attributes of the houses that match their housing choices. Customers may thus enjoy a smooth transition between being online and participating in excursions.

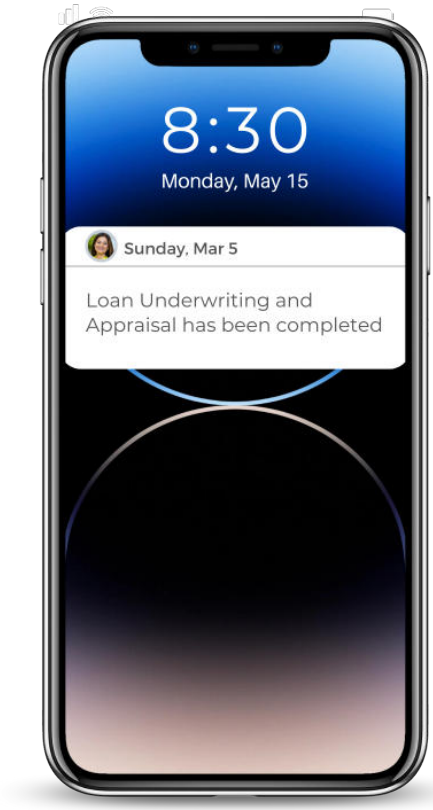

Service Chatbots

Customers value their personal relationship with their real estate agent, therefore realtors must devote more time to guide them through stressful and difficult processes over time. A service chatbot can assist to maintain that relationship by being able to engage with customers 24/7 and deal with several clients at the same time. Conversational AI is a technology that employs machine learning and natural language processing to generate tailored messages that respond to particular requests and concerns at any time. A service chatbot employs various machine-learning models to anticipate inquiries and provide predictive answers before they are even asked. By analyzing customer data and behavior, chatbots can provide highly customized and relevant support and recommendations. This includes personalized greetings, product recommendations, and tailored solutions to customer inquiries. This AI also predicts how workers will interact, provide advise, and learn so that it can teach itself to do the same. The result is an improved customer journey, where customers feel understood and valued. Overall, service chatbots are an effective tool for seeking to deliver hyper-personalized customer care and optimize the customer journey.

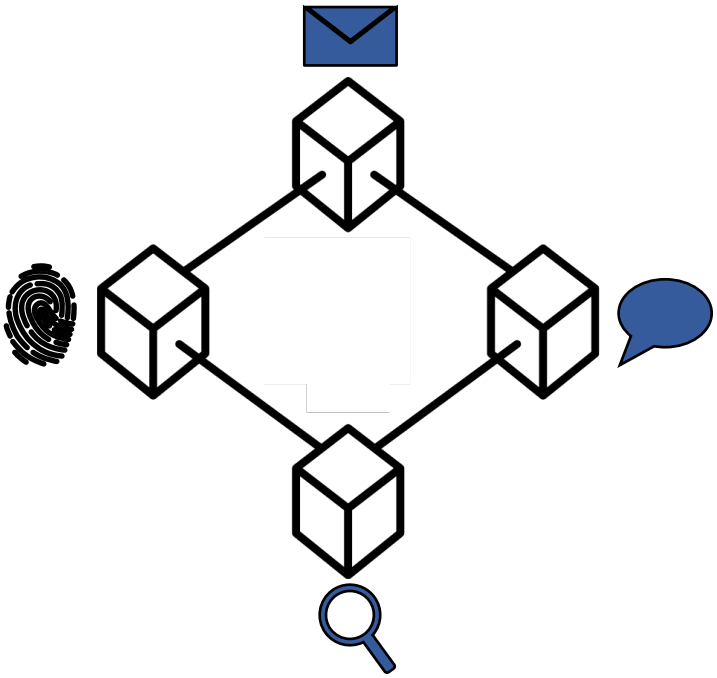

Real-Time Update Notifications

Real time update notifications can provide customers with updates on the status of their house that they are looking to buy or sell. Customers can now be informed with real-time alerts via mobile push notifications that are autogenerated from the customer data platform. This can allow for a more individualized experience as they can stay updated regardless of the process they are in, which creates operational efficiency that lessens their burdens. This means that we can provide customers with relevant and timely information, making the overall experience more personalized and convenient. By providing timely and accurate updates, companies can build better relationships with their customers and establish a positive reputation. Having real-time alerts can also for an increase in customer loyalty. Real-time notifications can increase customer loyalty by showing that a company values their time and is committed to providing them with the best possible experience. Real-time notifications can also help us quickly identify and resolve any issues or concerns customers may have, improving the overall customer experience. Overall, real-time update notifications can be an effective tool for businesses looking to enhance the customer journey and provide a more personalized experience for their customers.

Enhancing Data Protection

Blockchain

Blockchain technology may be used to validate encrypted transactions and ensure that financial records are not tampered with. A blockchain ecosystem effectively offers ownership rights, reducing paperwork, bureaucracy, and expense while ensuring openness. These are principles that everyone may embrace calmly and firmly. A blockchain transaction is a digital transaction that is recorded on a publicly accessible ledger. Because this ledger is dispersed throughout a network of computers, it is not under the jurisdiction of a single central authority. Because a blockchain transaction is validated by a network of computers, it is extremely safe. Blockchain transactions are transparent and unchangeable. As a result, they are perfect for real estate transactions, which are frequently complex and include several parties. In addition, blockchain allows for the creation creates a digital trail of transactions, making it simpler to monitor the origin, transportation, and ownership of products and assets. These technologies can speed up and minimize the cost of transactions by eliminating the need for intermediaries and shortening the processing and verification times. Overall, blockchain technology has the potential to significantly help Manu Real Estate across a wide range of business operations by increasing efficiency, security, and trust.

Remote online notarization (RON)

Remote online notarization (RON) is the process of having a state-licensed notary public notarize a document at a distance using electronic signature, identity verification, audio-visual and electronic notarial journal, and record keeping technology. Customers seek the simplest and most cost-effective notary solution possible. When compared to traditional notarization services, Remote Online Notarization (RON) has made it easier than ever to notarize documents at your convenience. However, the technique has yet to be accepted in many markets. Benefits of having Manu Real Estate use RON include enhanced access to notarial services, security and enforceability, and a lower risk of identity fraud. This will improve the data security that Manu Real Estate now lacks and potentially increase client trust.

Digital permission forms

Digital permission forms that inform clients about the purposes and results of any data gathering will be put into place. The 5 principles of data ethics—ownership, openness, privacy, intention, and outcome—will be followed in this. Clients will be safeguarded and informed about the purposes and results of our data gathering methods by the adoption of a digital privacy policy. An explanation of how cookies are used to track user activity and how the information gathered is saved in a secure database and used to train an algorithm that gives a customized website experience can be found in the privacy policy. This will provide openness to all of the clients and meet their privacy protection concerns. We are asserting control of the data by using an online form, and we want to be clear that Manu Real Estate will only ever use it for its own purposes. The California Consumer Privacy Act of 2018 (CCPA), which offers customers greater control over the personal information that businesses gather about them, will be followed by these digital privacy policies. Since personally identifiable information is de-identifying –that is, destroyed and not taken into account—machine-learning algorithms are also trained on unbiased data. The optimum outcome for customers and Manu Real Estate will come from the business practice of de-identifying a dataset.

Proposed Timeline

The HOUSE campaign will be initialized during the start of 2024 and conclude at the end of December 2024, for a duration of one year. Throughout the 2024-2025 fiscal year, activities will be operated in a strategic manner such that it maximizes efficiency and time.

January 2024: implement digital consent forms to be transparent about privacy and business ethical practices

March: Install customer data platform (CDP) to build technological architecture for data, AI, machine learning, etc.

April: Implement blockchain technologies to encrypt all transactions and financial records

December 2024: end of the HOUSE campaign

January: Utilize tracking cookies to collect key information about potential customers

February: switch to remote online notarization (RON) so documents are notarized via electronic forms

March: implementing Social Media Advertising, custom targeted email advertising , omnichannel optimization, real-time update notifications and service chatbots

C. PROPOSED METRICS AND KEY PERFORMANCE INDICATORS

We will calculate quantitative metrics and key performance indicators (KPI's) used to assess the overall short term and long term performance of Manu Real Estate. KPIs in particular assist in determining the strategic, financial, and operational accomplishments of Manu Real Estate. Our evaluation of the 2023-2024 fiscal year with Manu Real Estate will be split into two categories: financial/sales and marketing. In each of these categories, we will use metrics and KPI's that measure on a short term and a long term basis.

1. Financial/Sales Metrics and KPI's

Short Term: 2 month time horizon	Long Term: 1 year time horizon
An overall "%" decrease in SG&A	An overall "%" decrease in SG&A
Increase of 2% to 5% in sales growth rate	Increase of 7% to 10% in sales growth rate
Increase of 6 to 8 sales of commissions for every period of time	Increase of 36 to 48 sales of commissions for every period of time
An overall "%" increase in ROI	An overall "%" increase in ROI

SG&A: (Gross Profit – Operating Income); selling, general and administrative expenses (SG&A) reveals the overall effectiveness and efficiency of an organization's operations. The expenditures associated with running Manu Real Estate are included in the SG&A. Businesses can analyze their expenditure trends, find opportunities for cost savings, and boost overall profitability by keeping an eye on their SG&A ratio.

Sales Growth Rate: (Current net sales – Prior period net sales) / (Prior period net sales) x 100; Sales growth displays the percentage change in net sales from one period to the next. A positive sales growth rate indicates that Manu Real Estate is gaining more customers and therefore increasing revenue.

Sales Outlook: The number of people who purchase homes from our business is essential to our growth. Sales outlooks help real estate businesses set realistic expectations for their sales performance, enabling them to make informed decisions about future investments and growth strategies. It will also help Manu Real Estate to guide the allocation of resources, such as marketing and advertising budgets, to the areas that are expected to generate the most revenue.

Return On Investment: (Net Return on Investment / Cost of Investment) x 100; this allows us to assess the performance of each property and make decisions about whether to sell or retain the property. A high ROI indicates a good return on investment and suggests that the property is generating a substantial income, while a low ROI may indicate that the property is not generating enough revenue to justify retaining it.

2. Marketing Metrics and KPI's

Short Term: 2 month time horizon	Long Term: 1 year time horizon
increase of 43% to 60% in conversion rates	increase of 57% to 85% in conversion rates
increase from 4% to 7% in website traffic growth	Increase of 8% to 11% in website traffic growth
Achieve a CLV/CAC ratio of 3:1	Achieve a CLV/CAC ratio of 4:1

Conversion Rate: ((#) Conversions / (#) Visitors) x 100; conversion rates measure the effectiveness of the sales process by indicating the percentage of leads that become paying customers. It also helps indicate areas of the sales process that are working well, while low conversion rates can highlight areas for improvement.

Website Traffic Rate: ((#) Current Sessions - (#) Previous Sessions) / ((#) Overall Previous Sessions) x 100; Website traffic is a key indicator that Manu's Real Estates online visibility and reach, as more traffic generally indicates greater visibility and exposure to potential customers. Website traffic can be used to measure the effectiveness of marketing campaigns, such as email marketing, paid advertising, and social media, and guide the allocation of resources to the most effective channels.

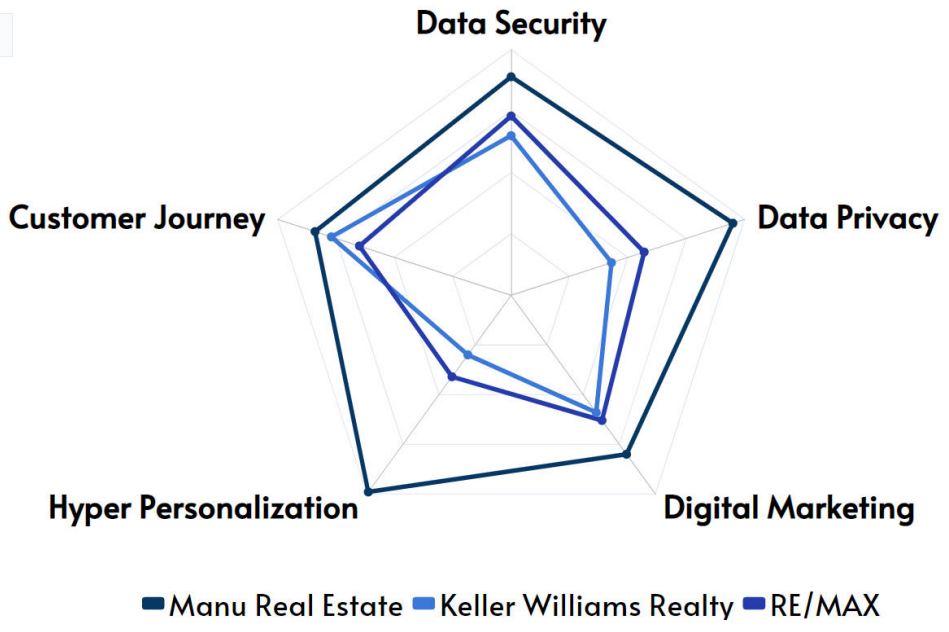

CLV/CAC Ratio: this offers insights into the effectiveness of Manu Real Estate's marketing campaigns. A CLV/CAC ratio that increases over time signifies an increase in the efficiency of the marketing campaigns since Manu Real Estate will be able to bring in more customers by spending the same amount of money. They will use the CLV/CAC ratio to make informed decisions regarding their advertising budget and how to best spend it.

COMPETITIVE ANALYSIS

As outlined, in our SWOT analysis, one of Manu Real Estate's biggest threats are other competitors, who are large competitors such as Keller WIlliams, RE/MAX, Berkshire Hathaway and Century 21. Below is a chart that compares our features with industry giants, which illustrates why Manu Real Estate would **stand out against all our competitors**.

	Manu Real Estate	Keller Williams Realty	RE/MAX	Century 21	Berkshire Hathaway HomeServices
Custom targeted email advertising	✓		✓		
Omnichannel optimization	✓	✓			
Blockchain	✓		✓		
Remote online notarization	✓			✓	
Service chatbots	✓	✓			
Digital Permission Form	✓			✓	✓

Despite this, by positioning ourself based on our strengths, Manu Real Estate can continue to dominate in the real estate industry from leveraging technological and strategic solutions. The chart on the right portrays the differences between Manu Real Estate and our biggest competitors: Keller Williams and RE/MAX. In terms of data security, data privacy, digital marketing, hyper personalization, and customer journey, we would outcompete both of them by a large margin.

VI. PROPOSED BUDGET

Costs Associated with Equipment

Our team developed a budget for our plan by factoring in all expenses that would be necessary for our plan to be effective, while also maintaining an affordable budget. Each item/strategy's price was cross checked with software developers to ensure the total budget was realistic. Below shows the equipment expenses for the proposed plan. Using infrastructure and software provided by third party product and service providers, such as Twilio, Google Azure, IBM, etc., these expenses will cover the needs to operate all 10 activities in our proposed plan. Each piece of technology is accounted for its cost and quantity throughout the entire timeline.

Expenses	Description	Cost	Quantity	Total Cost
Twilio Segment Business Plan (CDP)	- developer tools & public API - customer personas - secuirty protocols - custom targeted email advertising	$3,000.00	12	$36,000.00
Azure Machine Learning	-Production Web API - Standard S2 - machine learning software	$1,000.06	12	$12,000.72
Osano Cookie Management	- cookie tracker - 5 Data connectors & 4 domains - Max 50,000 monthly visitors	$550.00	12	$6,600.00
Ada Service Chatbot	- Up to 10,000 monthly page views - ML conversational AI	$1,500.00	12	$18,000.00
Notarize Business Plan	- $25 per seal - Single user only - Unlimited document uploads - Remote Online Notarization	$25.00	50	$1,250.00
IBM Blockchain Platform	- optimizable anywhere - data encryption	$1,500.00	12	$18,000.00
Total Cost of Equipment				$91,850.72

The total expenses for the **equipment is $91,850.72**. The pie chart below represents the total budget of our plan, and the percentage of money we allocated for a specific category of expense. Out of all costs, the Customer Data Platform, offered by tech company Twilio Segment, takes up the majority of the budget (39%).

- 39.19% - Customer Data Platform
- 17.33% - Service Chatbot
- 17.33% - Blockchain Technology
- 8.09% - Machine Learning Software
- 4.45% - Cookie Management
- 0.84% - RON

Costs Associated with Operations

The operating budget, which covers the costs and income produced by the company's month-to-month business activities, is depicted in the chart below. The overhead and administrative expenses specifically related to providing the services are also included in the operating budget. The total cost of the equipment is accounted for in the expenses category. Since Manu Real Estate provides services, there are no direct costs, including sales returned, sales discounted, and costs of goods sold (COGS).

	Feb	Apr	Jun	Aug	Oct	Dec	YTD
Revenue							
Net Sales	$23,000	$42,500	$135,500	$329,600	$578,700	$617,200	$1,726,500
Total Gross Profit	**$23,000**	**$42,500**	**$135,500**	**$329,600**	**$578,700**	**$617,200**	**$1,726,500**
Expenses							
Salary + Employee Expenses	$29,775	$29,775	$29,775	$29,775	$29,775	$29,775	$178,650
R&D	$10,000	$10,000	$10,000	$10,000	$10,000	$10,000	$60,000
Equipment	$15,308	$15,308	$15,308	$15,308	$15,308	$15,308	$91,850
Maintenance	$1,000	$1,000	$1,000	$1,000	$1,000	$1,000	$6,000
Total expenses	**$56,083**	**$56,083**	**$56,083**	**$56,083**	**$56,083**	**$56,083**	**$336,500**
Income Before taxes	- $26,308	-$13,583	$79,417	$273,517	$522,617	$561,117	$1,390,000
Net Income	**-$26,308**	**-$13,583**	**$66,675**	**$238,238**	**$456,478**	**$439,300**	**$1,150,500**

Software engineers will be hired to operate/maintain the back-end software, such as the machine learning algorithms and blockchain technology. Since machine learning, big data, and AI need to be heavily monitored, parts of the budget is invested towards research and development (R&D) and maintenance. Under the year-to-date (YTD) category, we see that the total **net income is $1,150,500**.

RETURN ON INVESTMENT

This is Manu Real Estate's anticipated return on investment after the implementation of the entire recommended plan for a period of one year. The profitability of our investment is calculated from the anticipated gross profit and the anticipated total expenditure.

ROI (1 year) = 243%

$$100\left(\frac{\text{Investment Valuation - Investment Costs}}{\text{Investment Costs}}\right) = 100\left(\frac{\$1{,}150{,}500 - \$336{,}500}{\$336{,}500}\right)$$
